

THREE-STEP DAILY REGIMEN IMPROVES SIGNS OF HAIR LOSS

THE HAIR REGROWTH SYSTEM by BrandMD uses a novel three-step daily regimen to improve the signs of hair loss, according to the company.

The treatment system includes BrandMD's HRS-10, a biomimetic peptide that is combined with red clover extract. The Hair Regrowth System's ingredients and technology work to stimulate hair growth and improve hair follicle anchoring, giving users fuller, thicker hair.

The HRS-10 technology uses peptides, essential oils and extracts, and is safe for use in men and women.

The hair system is available exclusively to medical professionals for in-office dispensing.

MARKERS USE WHITE INK FOR CLEAR LANDMARKS

VISCOT MEDICAL now offers its White E-Z Removable Ink, a marker designed for marking injection sites and for physician consultations.

The new markers are in white, complementing Viscot's green and red E-Z Removable Ink markers. The ink is easily washable with water or alcohol swabs.

The markers are available in a mini-marker trial pack of six, or in containers of 30.

Detox chemical peels rejuvenate without flaking

GLYCOLIC CHARCOAL DETOX CHEMICAL PEELS by Bioelements are acid-hybrid formulas designed to remove the uppermost layer of the skin without flaking, pain or downtime, according to the company.

Levels 2 and 3 of the peel system are ideal for patients with clogged pores, milia, dull skin, rough skin, loss of firmness and moderate-to-severe signs of aging and moderate hyperpigmentation. They contain lactic acid, glycolic acid and activated charcoal.

The system's Peel Prep Lipid Eraser helps to eliminate oil, water and some surface dead skin cells to accelerate the treatment results and to provide an even penetration of the peel formulas, the company states. It contains extracts of thyme, burdock, chamomile, sage, white oak bark and calendula. The peel system will be available in September.

CREAM IMPROVES APPEARANCE OF STRETCH MARKS

STRETCH MARK CRÈME, launched by derma e, is a physician-developed product that helps to visibly diminish stretch marks by improving texture, color and overall appearance.

Using argan oil, cocoa butter, coconut oil and shea butter, the Stretch Mark Crème conditions the skin to help boost elasticity and resiliency, the company states. Vitamin E nourishes the skin to promote healing, while hyaluronic acid attracts and binds moisture to the skin to allow for a smoother, softer appearance.

In a small study, participants used the cream two to three times a day over the course of eight weeks. Eighty-two percent of participants reported improved skin texture and smoothness, while 73 percent demonstrated improved color and 100 percent reported their skin felt fully moisturized. Seventy-three percent of participants demonstrated an overall improvement in the appearance of their skin.

The cream is vegan, hypoallergenic, paraben-free, GMO-free and retinol-free.
